

## ABSTRACT OF THE DISCLOSURE

An anti-drilling structure of a latch is disclosed. The latch comprises an inner shaft body with a non-circular key hole exposed at the external end face of the inner shaft body, characterized in that the external end face of the inner  
5 shaft body is provided with an anti-drill plate, a protrusion and a recess structure is provided between the external end face and the anti-drill plate so that the anti-drill plate can be positioned and cover the external end face of the inner shaft body, thereby when the anti-drilling plate is forced to open or damaged by external force, the anti-drilling plate will rotate and the  
10 components at the internal section of the latch are protected from damages.
